Graded Labs — Writing and Executing SQL Scripts

You will write and execute queries from scripts, and redirect the output to text files. You will join two or more tables, filter data by given parameters, and sort data by specific variables.

1. Group our suppliers by American, North American if they are located in Canada or Mexico, or Foreign if they are not located in the USA, Canada, or Mexico.
2. I need a list of our customers and the first name only of the customer representative.
3. You sell some kind of dried fruit that I liked very much. What is its name?
4. Give me a list of our customer contacts alphabetically by last name.
5. I want to see when customers placed orders in December. Give me a data file showing the day of all December orders.
6. How many days old are you today?
