Graded Labs — Writing and Executing SQL Scripts

You will write and execute queries from scripts, and redirect the output to text files. You will join two or more tables, filter data by given parameters, and sort data by specific variables.

1. What is the order number and the date of each order sold by each employee?

2. List each territory by region.

3. What is the supplier name for each product alphabetically by supplier?

4. For every order on May 5, 1998, how many of each item was ordered, and what was the price of the item?

5. For every order on May 5, 1998, how many of each item was ordered giving the name of the item, and what was the price of the item?

6. For every order in May, 1998, what was the customer's name and the shipper's name?

7. What is the customer's name and the employee's name for every order shipped to France?

8. List the products by name that were shipped to Germany.
